"The mind is an epiphenomenon of the body, and the body is an epiphenomenon of the mind. We operate as body-minds. The body is the visibility of the soul, and soul is the life of the body. You cannot deal with everything by sheer will power or mental approaches. We are embodied in a physical cosmos and we have our bill to pay to physical existence. And that includes our relationship to the physical aspect of the earth; it means to plants, stones and animals."
