

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

Homeopathy and Health

JUNE, 1914

PORTLAND, OREGON

VOL. II, NO. 2

This Magazine of good cheer and good health is sent free to the people. A copy can be had for the asking. The purpose of this Magazine is to record accurately, simply, and interestingly, what Homeopathy has done, is doing, and can do, and to disseminate among the people the correct knowledge of Homeopathic treatment as the scientific therapeutic resource of medicine and medical achievement. It will also give suggestions of value on diet, hygiene, and sanitary matters which promote good living and good health.

EDITOR AND PUBLISHER, DR. F. F. CASSEDAY

517 Dekum Building, Portland, Oregon

SOME OF THE HOMEOPATHIC INSTITUTIONS OF THE UNITED STATES

There are: 9 National Homeopathic Medical Societies, 4 Sectional Homeopathic Medical Societies; 34 State Homeopathic Medical Societies, 104 Local Homeopathic Medical Societies, 11 Homeopathic Alumni Associations, 50 Homeopathic Medical Clubs, 3 General Homeopathic Associations, 56 General Homeopathic Hospitals, 46 special and private Homeopathic Hospitals, 54 Homeopathic Sanitariums, 52 institutions under Homeopathic treatment, 49 Homeopathic Dispensaries, 16 Homeopathic Colleges, 23 Homeopathic Medical Journals.

A partial report of the Medical Colleges shows the aggregate valuation of lands and buildings of only a part to be \$2,882,620. A partial report shows the Endowment funds of a part of the colleges aggregate the sum of \$1,124,200.

A partial report from the Homeopathic Hospitals of the United States shows those hospitals reporting having 16,730 beds and caring annually for more than 100,000 patients.

The number of Homeopathic Hospitals is constantly increasing and additions are being made to those already built in order to care

for the increasing number of persons who demand Homeopathic treatment by Homeopathic Physicians in Homeopathic Hospitals.

Wealthy men and women are constantly donating large sums to the construction of Homeopathic Hospitals and devising large sums for the same purpose in their wills. Homeopathy is doing such a grand work in curing the sick that the benevolent recognize the fact and endow and build Homeopathic Hospitals. Try Homeopathy when ill.

SOME STATISTICS SHOWING WHAT HOMEOPATHIC TREATMENT IS DOING AS COMPARED WITH THE OLD SCHOOL TREATMENT

In the treatment of pneumonia for thirty-two years the average world death rate under Homeopathic treatment is 3.9 per cent, while under old school treatment the death rate is 29.5 per cent. (For all details, including actual Hospital percentages, see *The Medical Century*, New York, August, 1912.)

In the treatment of diphtheria the Homeopathic death rate (without antitoxin) is 3.8 per cent, while the allopathic death rate (with antitoxin) is 16.1.

(For details see *The Medical Century*, New York, August, 1912.)

The following table is issued by the authority of the American Institute of Homeopathy, the National Homeopathic Medical Society of the United States, and the oldest national medical society in the country. This table shows the percentage of deaths for the disease named averaged over a period of one hundred years under Homeopathic treatment compared with allopathic treatment:

	Allopathic	Homeopathic
Cholera	49.57	16.83
Yellow Fever	43.68	5.33
Pneumonia	31.22	5.34
Measles	6.3	3.7
Hydrocephalus	90.0	57.0
Pleurisy	13.5	2.5
Typhoid	33.95	8.58
Diphtheria	50.3	11.2

Erysipelas	8. 6	1. 6
Small-pox	33. 3	18. 5
Peritonitis	20. 5	4. 5
Scarlet Fever	20. 6	2.17
Croup (membranous)	78. 5	21. 5
Diarrhoea	21. 0	9. 0
Dysentery	22. 0	3. 0

The following table shows comparative percentage of deaths and number of deaths as the result of general hospital treatment in Homeopathic and Allopathic hospitals named in New England:

Hospital	Patients treated	Percentage of deaths	
		Deaths	deaths
Massachusetts Homeopathic Hospital.....	4,925	178	3.61
Mass. General Hospital (Allopathic).....	6,392	450	7.04
Worcester City Hospital (Allopathic).....	4,630	410	8.85
Rhode Island Hospital (Allopathic).....	6,399	639	9.97

For 1911, Massachusetts Homeopathic Hospital had a death percentage of 3.4.

Comparative percentage of cures of the insane:

In ten allopathic hospitals for the insane, the percentage of cures in all cases admitted (on the authority of the Report of the State Board in Lunacy for the State of New York) as 23.92. In the Westboro State Homeopathic Hospital (Mass.) for five years ending March, 1909, the percentage of cures was nearly double this figure—46.31. In Middleton State Homeopathic Hospital (N. Y. State) during the last five years it was 40.31. In three other Homeopathic hospitals the rate ranges for recent periods from 32 to 45.53 per cent.

In all forms of disease the Homeopathic treatment shows a far greater percentage of cures shock after operations has been practically eliminated by the administration of properly selected homeopathic remedies. Shock in allopathic (so-called old school) practice of equally skillful surgeons causes a large number of deaths, thus proving conclusively the value of the well selected Homeopathic remedies to prevent shock and assist prompt recovery.

The value of properly selected Homeopathic remedies before and after childbirth in promoting the comfort, increasing the resistance,

and hastening recovery of the mother, is amply proven by thousands of expert Homeopathic Obstetricians in all parts of the world.

Those who have given Homeopathy a trial in any form of disease are quickly convinced of its efficacy. A trial is all that is necessary.

THE ARROGANCE OF THE RICH

Any irreverent reference to the rich always makes Harper's Weekly peevish. A surgeon recently wrote to the New York Times explaining why fees differed according to the financial status of the patient; incidentally he drew attention to the well known fact that millionaires do not usually pay their medical attendants graciously. He wrote dispassionately, for letting go of money with pain and difficulty is characteristic of those who have acquired it; it is an essential qualification of the unlovely acquisitive class. Notwithstanding the writer's moderation, Harper's Weekly hurries to point out to him that he obtained his medical education through the charity of the rich; and that a more reverent attitude toward the wealthy would be becoming.

The medical profession hardly feels indebted to the rich, be they so at first hand, or through inheritance. It is the piggishness of capital that gives rise to most sickness, to typhoid epidemics, to tuberculosis, to the industrial accidents that demand surgical intervention. Capital could clear the country of malaria, and of disease and accident generally. We do not ask this of capital; we demand it of the State. Still this characteristic tone of the distinguished reactionary weekly is better perhaps than its approval, which a great statesman fortunately begged it to withdraw from him.

We might—we will, indeed, some day—induce the State to endow professorial chairs, which are now needed more than the gorgeous buildings to the erection of which private capital insists, for obvious reasons, on devoting itself. Meanwhile private capital might extend scientific help to the blind, the crippled, the underdeveloped, and the starving, mostly victims of wealthy selfishness; it could help such to help themselves. Indeed it is beginning to heed protests that are no longer accompanied by a respectful touching of the cap.—New York Medical Journal.

THE CASE AGAINST THE VACCINES AND SERUMS

By Frank F. Casseday, Ph. B. M.D., Portland, Ore., U. S. A.

The promoters and chief beneficiaries of the vaccine and serum craze are the manufacturers. The manufacturers have secured the services of fluent and plausible writers to place the alleged merits of serums and vaccines before the medical profession, they have collected literature favorable to their use, have discouragd the publication of fatalities resulting from the use of vaccines and serums, and in all instances have sought to explain fatalities, and minimize the dangers resulting from the use of vaccines and serums. This is not exactly a scientific precedure, but it is a good prime commercial scheme, and it sells the goods and pays dividends.

The craze for bacterial vaccines and serums has reached its height. The reaction against their use by careful, and conservative medical men is setting in very strong. The Journal of American Medical Association in a recent issue has this to say: "The therapeutic possibilities of vaccine therapy have been exaggerated. The promiscuous use of the stock vaccines of commerce in the treatment of acute and chronic infections is an irrational procedure. Ready mixed commercial vaccines should be abolished." Prof. Ehrlich recently said "The possibilities of serum and vaccine have been exhausted."

Vaccines are dangerous and deadly in their action. Vaccines are prepared by mixing bacteria from different sources, from different individuals, who are suffering from the various diseases caused by the different bacteria. In other words to state it plainly the filth and disease germs from different persons are mixed together and given to healthy persons on the presumption that the bacteria so given or injected will prevent or cure the diseases caused by such germs, or bacteria. The bacteria are "killed" so the manufacturer tells us, hence the bacteria can do no harm. The effect desired and expected is simply to arouse nature to throw off certain diseases. If the bacteria are "killed" the peculiar and characteristic action of the bacteria is wanting, and the action of the injected mixture is purely that of a filth poison which the body processes seek to expel. Why not use a sterilized mixture from a garbage can or sewer?

On May 20, 1914, The Cincinnati Times-Star publishes a special dispatch from New York City which stated that three healthy children by the name of Mercer aged ten, six, and five years, respectively, received typhoid vaccine furnished by the Department of Health of New York City. Their father was sick with and died later of typhoid fever. Within a few hours after the injections were given to the children they all become ill, their legs became weak, and began to swell. Dr. Sydney E. Smith who administered the serum (vaccine) called Dr. George E. Laidlow in consultation. The children grew rapidly worse. Dr. Smith said they had typhoid symptoms and also showed effects of blood poisoning, in body markings. He informed the mother that the condition of children was hopeless.

They insist the bacteria are "killed." The Mercer children showed the symptoms of typhoid fever within a few hours after the injections of the vaccine. The Mercer children also showed symptoms of blood poisoning. Here is a clean cut typical case which shows that the so-called "killed" bacteria are active and will cause typhoid fever, that the vaccines are dirty filth and will produce blood poisoning. These Mercer children were presumably healthy, happy, normal individuals. There was nothing to show that they would contract the disease. They were given no chance, but were inoculated with typhoid poison so they would not contract a disease which under Homeopathic treatment has an extremely low percentage of mortality. The active disease resisting functions of the body would, in all human probability, have prevented these children contracting typhoid fever, but they were deliberately inoculated and poisoned. It is time scientific and conscientious physicians protested against such barbarous, and inhuman work. It is a disgrace and a reproach to the medical profession who practice, tolerate, or permit it.

In the great majority of cases where vaccines are given there is fever, weakness, irritation, and often sudden death. This shows the poisonous effect of the vaccines. It also shows that a poison has been introduced into the body and the body is making tremendous effort to expel it.

Dr. Charles E. Woodruff, Lieutenant-Colonel, retired, of the United States Army Medical Corps and said to be one of the greatest sanitary experts in the world, in a magazine section of the Daily

Examiner, says: "The whole theory of vaccination and serums is wrong. It insures us against catching one disease only to make us doubly liable to catch others, particularly tuberculosis." Dr. Woodruff goes on to say human beings have a natural resistance to tuberculosis, and with ordinary care in preventing or developing causes, will fight off the plague through a lifetime. Though the use of vaccines and serums the body is robbed of a part or all of its natural immunity or resistance to disease, and tuberculosis is developed, where it would not develop without the vaccine inoculation. Dr. Woodruff quoted Dr. LeTulle of Paris, France: "That all serums and vaccines will cause incipient cases of tuberculosis to get worse, and this opinion is concurred in by Drs. C. H. Spooner, and Louis and Combe, assistants to Vincent at the Val de Grace, Paris. Chantmerse of Paris warns against the use of vaccines where tuberculosis is suspected.

Serums owe most of their popularity to Anti-Diphtheritic serum. The horse is inoculated with Diphtheria, and the diluted and sterilized serum from the horse's blood, is the foundation for the Anti-Diphtheritic serum. Its use came about by the discovery that the horse was immune to the deadly effects of diphtheria, and it did not kill the horse when he was inoculated with the poison of diphtheria. Pure serum properly sterilized from the blood of the horse is also used for certain diseases. Even though the horse is immune to diphtheria it does not necessarily follow that the horse serum impregnated with the modified horse diphtheria will always render human beings immune to diphtheria, or modify and cure the developed disease. To oppose one poison (toxin) with another poison (toxin) which has the serum of the horse's blood added is a dangerous and unscientific experiment. The resistant power of the body afflicted with diphtheria is already rallying all its strength and resources to rid the individual of the immense amount of poison (toxin). It is folly to add more diphtheritic poison (toxin) to body already well nigh overwhelmed. In thirty-five years' practice I have seen many children killed with Anti-Diphtheritic Toxin, and both before and since the use of Diphtheritic Toxin I have seen more cases recover from Diphtheria under Homeopathic treatment without Antitoxin than under Antitoxin. If the horse serum gives the horse immunity

to diphtheria it would be far better practice and decidedly more scientific and reasonable to give persons afflicted with diphtheria the pure horse serum undefiled with poison. It is my opinion, and the conclusion is justified by all the facts, that all the merit and efficacy of Antitoxin for diphtheria, if it ever does good, lies wholly in the immunizing effect of the pure horse serum alone. If the horse serum alone and unaided confers immunity upon the horse to diphtheria, it is certainly a grotesque and amazing thing to add the terrific filth poison of diphtheria to pure horse serum on the guess that this filth and poison will somehow and in some unknown and marvelous way cure diphtheria in human beings. The whole proposition is ridiculous and will not stand analysis.

Following the use of anti-toxin for diphtheria a flood of serums and bacterial vaccines have appeared. There is no other animal beside the horse which is immune to disease in the same manner, hence to conclude that serums modified and made through other animals will be efficacious is not borne out by the facts.

The Antimeningitis Serum is injected into the lower portion of the spinal canal after an equal quantity of the spinal fluid is drawn off. This serum is extremely uncertain and deadly in its action and has caused many deaths. Dr. S. P. Cramer an eminent Surgeon of Cincinnati, former U. S. Army Surgeon, and recently President of the Cincinnati Academy of Medicine, and Professor in the University of Cincinnati, made the following report to Mr. E. J. Lederle, President of the Board of Health of New York City, "The Board of Health of the City of New York prepares and distributes a serum for the treatment of cerebro-spinal meningitis." "On Monday, May 17, 1913, I reported to the Academy of Medicine of Cincinnati six cases in which death by respiratory paralysis had occurred in a few minutes following the administration of this serum. I reported two other cases in which respiratory failure had followed the injection; breathing was revived by artificial respiration. All these cases occurred in children."

"On March 21, 1913, the Director of the Rockefeller Institute, in a statement to the Associated Press, said: "If the anti-meningitis serum itself, or the preservative contained in it, were the cause of the deaths reported by Dr. Kramer of Cincinnati many other similar

reports should have been received; but such fatalities have been reported by no one else."

"In the U. S. Public Health reports, January 26, 1912, on page 115, Dr. W. H. Frost, passed assistant surgeon U. S. Public Health and Marine Hospital Service, has described such deaths. In the Journal of the American Medical Association of March 1, 1913, page 959, Dr. Arthur H. Parmalee reports ten cases of respiratory paralysis. Indeed so common has this catastrophe become, that a circular issued by your department, and a copy of which I am enclosing, directions are given as to what should be done when breathing stops, following the injection."

These cases and statement speak for themselves.

After Dr. Flexner of the Rockefeller Foundation (old school or allopathic) had reported a death rate of 15 per cent from Cerebro-Spinal Meningitis, the New York Health Reports show 372 cases of Cerebro-Spinal Meningitis with 336 deaths, a mortality of over 90 per cent, and that right under the shadow of the Rockefeller Foundation.

Homeopathic Treatment can show a much lower mortality from Cerebro-Spinal Meningitis without the serum.

The mixtures known as Salvarsan and Neo-Salvarsan put out by a German physician for the treatment of syphilis have for their principal ingredient arsenic. The theory of the treatment is to flood the system of the diseased person suffering from syphilis and so drive out the blood poison.

On March 7, 1914, in the County Hospital at Los Angeles, California, eight patients died immediately after receiving one dose each of Neo-salvarsan mixed with the individual blood serum of each patient. Two other patients escaped because there was not time to prepare their doses. Lucky patients. In all of these cases as in the cases of deaths from antimeningitis serum death was due to paralysis of respiration and the nerve centres. What caused these deaths? The Eclectic Medical Journal of Cincinnati for April, 1914, page 215, says editorially: "Perhaps the mortuary records in these cases will be inscribed G. O. K. which signifies "God Only Knows." But why use preparations, with but doubtful expectation of relief, that require such extremes of cautious manipulation and that are liable,

even if innocuous when first prepared, to become deadly by some swift and magic like change?" Does anyone recall wholesale deaths from any such changes taking place in standard vegetable medicines long recognized as safe and effectual in disease?" Let something novel come from Germany, however, with loud acclaim of wonderful possibilities and America seizes upon it with astounding avidity—in the end to regret her rashness. Dr. Solomon Solis-Cohen recalls such a record of a German coal-tar product, when in speaking in a paraphrase of the song of the Jewish women when Saul and David returned victors over the hosts of the Phillistines: "Influenza has slain its thousands, but antipyrin its tens of thousands." When the census of deaths from intra-spinal and intravenous injections will have been completed we predict that the record will compare favorably (or unfavorably) with that of the imported synthetic analgesics and febrifuges.

In an article on "Why Vivisection," in the April *Cosmopolitan*, there appears the following:

"Take Diphtheria and Antitoxin for instance. The mortality percentage has never been as low for antitoxin as it has been for other remedies. Dr. Newman, of Potsdam, found that in his private practice, without serum there was an average of only 1.6 per cent mortality, as against 15.4 per cent in the city infirmary where serum treatment was used. Leuddecken, using cyanide of mercury, reported a mortality of 1.2 per cent. Hilol and Goubeau, employing per chloride of mercury report a mortality of 4.7 per cent. Kastorsky, using an alcoholic solution of menthol, treated 37 successive cases without a death. The latest reports of Metropolitan Asylums Board, England, show: without antitoxin (in 583 cases) mortality 1.88 per cent; with antitoxin (in 4839 cases) mortality 10.18 per cent."

The mortality of diphtheria in the Homeopathic School of Medicine, where the above mentioned drugs have been used for many years, has never been as great as with antitoxin. If the case is seen early the disease is usually aborted.—Pacific Coast Journal of Homeopathy.

Antitoxin has killed its thousands. Antitoxin has killed hundreds of children suffering from mild cases of diphtheria. If these children had been treated with homeopathic remedies by a competent homeo-

pathic physicians without antitoxin a large number would have been saved. Antitoxin should be consigned to the scrap pile.

A few years ago old school or allopathic surgeons advised against the washing of pus cavities even with sterile water for fear of inducing mixed infection. The very latest bacterial vaccine is composed of a mixture of all sorts of bacteria is one conglomeration, and these bacterial vaccines are used for all sorts of diseases, a sort of shotgun prescription of filth and disease germs injected into the living body as a remedy against disease. It is a revolting and disgusting practice. These filth and disease germs produce blood poison.

There are many hundred vegetable and mineral medicines which have proven curative in all forms of disease for hundreds of years. They are clean and do not carry blood poison, or depress the human body, or impair the health in any way, when given according to homeopathic practice. There is no doubt of their curative action. They do not injure the body or impair the health. Why inject filth and disease, and blood poison into clean human bodies in the form of bacterial vaccines and serums attenuated through animals (which are often diseased) when we have at hand proven vegetable and mineral medicines which cure disease and do no harm. Employ Homeopathy and save your lives and the health of yourself and family.

Homeopathy has proven several hundred vegetable and mineral medicines on human beings. Their curative action is known. They have been used for more than a hundred years to treat the sick. No one can truthfully say a single death has been caused by their use. On the contrary hundreds of thousands of men, women and children have been cured of disease by their use and restored to health and usefulness.

Give up filth injections and powerful mineral poisons and try Homeopathy when ill.

An effort is being made to build a homoeopathic hospital on the Island of Barbados, West Indies. The sentiment there has always been favorable to Homoeopathy.

**SCIENTIFIC DEMONSTRATION OF HOMEOPATHIC MEDICINE
IN BALTIMORE**

Before a distinguished group of scientists in the Johns Hopkins Physical Laboratory, Dr. L. J. Henderson of Harvard University attested that there is power in attenuated homeopathic medicines of high potency, as it is sometimes called.

Dr. Henderson asserted that researches extending over many years convinced him that inorganic matter contained latent life. He added that he believed that under certain conditions this latent life could be aroused, but that infinitesimal attenuations rather than crude substances were necessary.—Pacific Coast Journal of Homeopathy.

Scientific men everywhere are bearing testimony to the efficacy of homeopathic remedies, and their value in curing disease.

This, briefly, is the position of the profession today. Modern discoveries all corroborate the truths of homeopathy, the younger medical men are receptive, but the "leaders" hopeless.—J. Robertson Day, M. D., London, in British Homeopathic Review, October, 1913.

A BENEFICIENT GIFT

The British Homeopathic Association has received a gift of 5000 pounds sterling from Mr. Otto Beit to start a fund, the proceeds of which are to be devoted to research in which problems of medicine, particularly those, the solution of which is likely to throw light upon the range and mode of action of the homeopathic law.

TURKEY

The International Hospital at Adana has a staff in keeping with its name. Dr. Cyril Hass, Surgeon-in-Chief, and Miss Annie Davis, Superintendent of Nurses, are Americans; Miss Margaret Johnston, an Irish nurse; Miss Talbott, an English nurse; Dr. Salibian, a native Armenian, Assistant Surgeon, and four native nurses in training. Dr. Haas, in his annual report, enumerates the in-patients as 309; the clinical, 3,823.

HAHNEMANN AND THE ASIATIC CHOLERA

One of the most remarkable generalizations and deductions ever made by a medical man was made by Samuel Hahnemann, the eminent German savant, scientist and physician, who discovered the law of cure upon which Homeopathy and homeopathic treatment is based. While Hahnemann was practicing medicine in accordance with the Homeopathic law of similars, cholera became prevalent in India and other Oriental countries, and it was announced that it would soon spread all over continental Europe, England and America. Hahnemann, after a careful study of cholera in the books and writings of other (he had never seen a case up to this time,) noted its course, symptoms, and general trend, announced without hesitation that champhor and veratrum—album given in comparatively small doses—were the true Homeopathic remedies for most cases of cholera under allopathic or old school treatment as 30%. When cholera reached Europe these remedies, with others as he suggested and advised, were administered to cholera patients with the most marvelous results. This was a marvelous exhibition of scientific insight. Hahnemann knew the law of cure was true, and that the similar remedies to cholera would cure them. The truth of this prophecy and absolute confirmation of all his statements were made complete in several of the great world epidemics of cholera.

Osler, in his Practice of Medicine, page 232, gives the mortality from cholera under allopathic or old school treatment as 30 per cent to 80 per cent. Allbutt's system of medicine, Vol. 1, page 908, gives mortality from cholera under allopathic or old school treatment as about 50 per cent. Page 18 "Logic of Figures," (Dr. Bradford) Admiral Mordowinow, President of the Imperial Council of Russia, stated that in 1831-1832 the mortality under allopathic or old school treatment was 40 per cent.

The Homeopathic treatment of cholera shows the following mortality: Vide "Logic of Figures," Dr. Bradford, page 116 et seq. Dr. Quin, London, reports mortality of ten Homeopathic Hospitals 1831-1832, as 9 per cent.

Dr. Roth, an allopathic physician to the King of Bavaria, reported

officially and with great reluctance, that the Homeopathic mortality in 1831-1832 was 7 per cent.

Report of Hahnemannian Academy of Medicine showed that in New York the mortality from cholera was 6 per cent in 1849.

Page 118 idem op Admiral Mordinow, in same report, testified that the mortality of cholera under Homeopathic treatment was 10 per cent.

Page 136 idem op Joslin reports 4830 cases of cholera in three epidemics, 1831-1832, 1848 and in 1849, gave homeopathic mortality of 9.21 per cent.

Page 118 idem op, Dr. Wild, allopathic editor of the Dublin Quarterly Journal of Medicine, in his book on Austria, says "The allopathic death rate was 66 per cent from cholera. On account of this extraordinary result, the law interdicting the practice of Homeopathy in Austria was repealed, and the death rate of the same period Wild concedes was 33 per cent."

The mortality of cholera averaged all epidemics was under allopathic treatment 49.57 per cent while under Homeopathic treatment it was 16.83 per cent.

In the Hamburg epidemic of cholera, 1892 (see Handbook of Practice by Dr. C. J. Puhlman, page 526,) the allopathic mortality of cholera was 42 per cent. Under Homeopathic treatment the mortality ranged from 15.5 to 20 per cent.

EFFICIENT MEN AND WOMEN

In these days efficiency is on everybody's tongue. Efficiency is the measure of productive activity. It matters not in what line of work humanity is engaged, efficiency is the measure of their economic value to the community. Modern life is community life in the sense that we touch elbows very closely, our interests of necessity are largely common interests, whether we wish it to be so or not, hence we are dependant upon each other to a greater or less extent. Each individual brings to this life market place brains, muscle, initiative, energy, etc., to the degrees and with the measure of his or her ability, strength and personal interest. Ill health and sickness of all kinds decreases the efficiency of each individual who is ill or sick or disabled, and places the burden of their care and support upon the efficient members of the community. In this case sickness and ill health is a distinct economic loss, and any system

of medicine or medical science which lessens ill health and sickness confers a great blessing upon the individual, and in a large sense benefits society as a whole by reducing economic loss, and increasing the number of effective individuals, and increasing the amount of health, and food which this increased number of efficient individuals produce. Homeopathic treatment of disease has done this very thing, and is doing it today all over the world. Homeopathic treatment is useful in all forms of disease. Homeopathic treatment of disease has lowered the death rate in all diseases. Homeopathic treatment has increased the percentage of recoveries from all forms of disease. Homeopathy is making men and women more efficient everywhere.

HOMOEOPATHY IN UNIVERSITIES

A number of the leading Universities of the country have homoeopathic departments and others are contemplating adding the same in the near future. At present the school is represented in the state universities of Michigan and Iowa, in Boston University, in the University of Kansas City and in Baldwin University in Ohio.

HELP WITH THE GOOD WORK

Homeopathic Physicians and patrons of homeopathy can arrange to secure a supply of these magazines for distribution in their own communities and to their friends and acquaintances by addressing the publisher at 517 Dekum Building, Portland, Oregon. Let us all aid in this great work of carrying Homeopathy and homeopathic treatment of disease to the sick and suffering, and to all who wish to keep well and strong. Homeopathy cures quickly, pleasantly, and thoroughly. There are well educated homeopathic physicians everywhere in almost every community in every state in the union. Try homeopathic treatment and be convinced of its efficiency. It is not a new method of treatment. It has stood the test of more than one hundred years all over the world; and is employed by intelligent, thinking people, rich, those in moderat circumstances, and poor.

Notice.—After reading, kindly hand to a friend. No doubt many friends would be benefited by its perusal, or at least interested.

Historical Note

In July, 1843, the New York Homoeopathic Physician's Society issued invitations to the homoeopathic physicians of the United States to meet in general convention in the city of New York for the purpose of forming a National Homoeopathic Medical Society. The invitation was responded to by a considerable number of the leading homoeopathic practitioners of the country, who, according to previous arrangement, convened in the Lyceum of Natural History in New York City, on the 10th day of April, 1844, the 89th anniversary of the birth of the illustrious Hahnemann.

The convention was organized by electing Constantine Hering, M. D., of Philadelphia, Pa., President; Josiah F. Flagg, M. D., of Boston, Mass., and William Channing, M. D., of New York City, N. Y., Vice-Presidents; and Henry Dunnell, M. D., Secretary.

The following resolution was unanimously adopted:

Resolved, That it is deemed expedient to establish a society entitled "The American Institute of Homoeopathy."

John F. Gray, M. D., was elected General Secretary of the Institute, and S. R. Kirby, M. D., Treasurer.

The Convention having accomplished the object for which it had assembled, on motion, adjourned, sine die.

Immediately after the adjournment of the Convention, on the evening of the 10th day of April, 1844, at the call of John F. Gray, M. D., General Secretary-elect, the First Session of the American Institute of Homoeopathy was held. Josiah F. Flagg, M. D., Boston, Mass., was elected Chairman, and A. Gerald Hull, M. D., New York City, N. Y., Provisional Secretary.

A memorial service was held in the Pittsburgh Homoeopathic Hospital December 14th for three members of the staff who had passed away during the past six months. Then men honored were Drs. J. H. McClelland, Z. T. Miller and E. R. Gregg. The ward was beautifully decorated with flowers. President D. G. Stewart, of the Hospital Association, presided. Following the prayer Mr. Stewart spoke concerning his associates in hospital work in a way which brought tears to the eyes of all present. Dr. C. C. Rinehart made an address, as did also Mrs. George L. McCoy, who for so many years has been secretary of the Ladies' Board of the hospital. Others speaking were Drs. H. B. Bryson, Pittsburgh, and Dr. Gilbert Palen, Philadelphia. The service was one which will long be remembered by those present.
