

A MIRACULOUS HOMŒOPATHIC CURE OF ECLAMPSIA

DR. A. R. BHATTACHARYA, D.M.S., RANIGANJ

Wife of Sri Ray of Raniganj, a middle aged lady at her 9 months of pregnancy was suddenly attacked with Eclampsia. Firstly one local renowned M.B. was called and he diagnosed the case as Eclampsia and injected Morphia and advised to remove the patient to a hospital immediately, otherwise both mother and foetus might die. The guardian of the patient then called another renowned M.B. and also consulted the local Primary Government Hospital. They all advised to remove the patient to the big Hospital. One of the friends of the said guardian of the patient requested him to consult me in that situation if Homœopathy could do any help to that critical position. Accordingly I was called and found that the patient was in opisthotonus posture, clenched teeth, limbs hard, tonic spasm, whole body bent backward like an arch and was moving and howling, frequent suspensions of breathing for a few seconds. Examining I found that the foetus was living. It was about 8 a.m. I assured the party that the case was definitely curable in Homœopathy and I had successfully treated ten cases prior to that without any death and I took the case assuring them that the mother would be saved but the foetus would die within a few hours. Accordingly I gave two powder doses of *Cicuta v.* 200 to be taken at half-an-hour interval. At 9 a.m. the husband of the patient came into my chamber with joy and gratitude and related to me that the patient was sleeping quietly in an easy position snoring loudly and the lock-jaw had been removed and was taking sips of water off and on. At about 12 noon I again examined the foetus and found it dead. But the patient was normal. The relatives of the patient were afraid of having the dead foetus in the womb of the patient, especially so because the Allopaths suggested that the only treatment of the patient was to remove the foetus by Caesarean

section to save the mother. I again assured them to rely upon Homœopathy which would be able to make a normal delivery within a few days. Medicine was given symptomatically. On the 10th day evening the guardian reported that the labour pain had started and according to symptoms Caulophylum 200, 2 doses were given which delivered the dead foetus safely giving no trouble to his mother. All the local Allopaths were stunned on hearing the said treatment. I have forgotten to mention that the patient enjoyed normal diet and movements during the period before delivery. Thanks to our Master and his Homœopathy! Joy Homœopathy!
