

## : BOOK REVIEW

**Christian Samuel Hahnemann—A Short Biography**—by Rosa Waugh Hobhouse. Published by The C. W. Daniel Co. Ltd., Ashingdon, Rochford, Essex, England. Price 5s. (net).

We have thankfully received and perused this book. It contains in a very abridged form many of the essential features of the Master's life, as well as the impressions and views of many of his contemporaries regarding him. This book will be of great value especially for those who have want of time or opportunity for going through the bigger biographies of Hahnemann written by T. L. Bradford or Richard Haehl or the present Author herself.

(Contd. From Page 481)

lity to expectorate is found in every species of cough, no matter what you call the cough. These coughs are always *better* by *Sips of cold water*.

They are subject to rheumatism, rheumatoid arthritis, especially where joints are stiff and tendons shortened drawing the limbs out of shape, and with this they can neither stand *heat or cold*, and it is *worse in dry weather* and *better in damp, wet weather*.

These people suffer from warts, warts of eyelids, eyebrows, nose, face and all over the place. Believe me, it really (Causticum) produces and cures warts.
