POISONS AND THEIR ANTIDOTES.

In all cases when poisonous substances have been taken into the stomach, the first step is to cause their ejection by vomiting or neutralization by a proper antidote. Vomiting should be produced by the simplest means: by tickling the throat with a feather, by drinking large quantities of lukewarm water, or by placing snuff or mustard mixed with salt upon the tongue.

But should these means fail, immediate resort should be had to one of those emetics which is most powerful and speedy in its operation, as tartar emetic, sulphate of copper, or sulphate of zinc.

When vomiting has already taken place, continue it by copious draughts of warm water, mucilaginous drinks, or by tickling the throat with a feather, until the poisonous substances are evacuated. If vomiting cannot be produced the stomach-pump must be used, especially in case of arsenical or narcotic poisoning.

The following table contains a list of the usual poisonous substances and their appropriate antidotes:

<i>POISONS.</i>	<i>ANTIDOTES.</i>
Acids, . . .	Alkalies—very thick soap-suds of Soap and Milk, Chalk, Soda, Lime-water, Magnesia, Saleratus. Sulphuric Acid Stains black—Nitric, yellow. In case of Sulphuric Acid do not use soap-suds or lime-water. For Nitric or Oxalic Acid use the Carbonates of Magnesia and Lime. For Prussic Acid use dilute Ammonia, the cold <i>douche</i> and Electricity.
Alkalies, . .	The Vegetable Acids, Vinegar, Oils in large quantity.
Alcohol, . .	After producing energetic vomiting follow with moderate doses of common salt. Also use an injection of salt and water.
Antimony, .	Astringent Injections, Oak Bark, Tannin, Peruvian Bark, Galls, or strong Green Tea.
Arsenic, . .	Hydrated Peroxide of Iron in tablespoonful doses every five or ten minutes until relief is obtained. May be made as follows: "Take of Sulphate of Iron four ounces, Sulphuric Acid three and a-half fluid drachms, Nitric Acid six fluid drachms, or a sufficient quantity, water two pints. Dissolve the Sulphate of Iron in the water, and, having added the Sulphuric Acid, boil the solution; then add the Nitric Acid in small portions, boiling the liquid a minute or two after each addition until the acid ceases to produce a dark color. Filter the liquid, allow it to cool, and add solution of Ammonia in excess, stirring the mixture briskly. Wash the precipitate with water and keep in close bottles with sufficient water to cover it.— <i>U. S. P.</i>

POISONS.

ANTIDOTES.

Baryta or Lime,	}	Epsom or Glauber Salts; also Oils, Sulphate of Soda and Magnesia or Phosphate of Soda.
Bismuth and Compounds,		Albumen in some form, sweet milk and sweet Mucilaginous drinks.
Copper and Compounds,	}	Albumen in some form, as the white of eggs strong Coffee, Ferrocyanuret of Potassium, Mag- nesia and Mucilaginous drinks.
Gases,		Dilute Ammonia, the cold <i>douche</i> followed by Electricity, and finally friction.
Gold and Its Salts,	}	Sulphate of Iron and Mucilaginous drinks.
Iodine,		Starch, Wheat Flour or Arrowroot beaten up in warm water.
Iron and Its Salts,	}	Carbonate of Soda and Mucilaginous drinks.
Kreosote, . .		Albumen in some form.
Lead and Its Salts,	}	Epsom Salts, Glauber Salts, dilute Sulphuric Acid Lemonade, Hydrated Sesqui-Sulphuret of Iron.
Mercury and Its Salts,		Albumen in some form, to be followed by an emetic.
Opium and other Narcotics,	}	Frequent powerful emetics. The cold <i>douche</i> and Electricity indispensable. Maintain motion and heat. After the emetics give strong Coffee and frequent doses of Aqua Ammonia. For the spasms of Nux Vomica or its alkaloid Strych- nia use Chloroform or Chloric Ether and Elec- tricity.
Phosphorus,		Magnesia in copious draughts; Mucilaginous drinks.
Silver and Its Salts,	}	Common Salt in large quantities.
Tin and Its Salts,		Albumen in some form.
Zinc and Its Salts,	}	Albumen in some form, Carbonate of Soda, Milk in large quantities.
Bite of Rabid Dog,		Apply the actual cautery to the wound and give large doses of Zinc or Muriate of Iron for several days.
Venomous Insects,	}	Tinc. Ledum Palustre, internally and exter- nally. Iodine or Hartshorn and Oil may be applied to the part.
Poisonous Serpents,		The actual cautery to be applied immediately, and intoxication to be produced with Brandy or Whiskey.
Poisonous Fish,	}	A powerful emetic, to be followed by a purgative. Sponge the entire body with vinegar and water.

THE READY METHOD IN ASPHYXIA.

BY MARSHALL HALL, M.D., F.R.S., ETC.

R U L E S.

1st. Treat the patient *instantly, on the spot, in the open air*, freely exposing the face, neck and chest to the breeze, except in severe weather.

2d. Send with all speed for medical aid, and for articles of clothing, blankets, etc.

3d. *To clear the throat*, place the patient gently on the face, with one *wrist* under the forehead; (all fluids and the tongue itself then fall forward and leave the entrance to the windpipe *free*).

4th. *To excite respiration*, turn the patient lightly on his side, and apply snuff, or other irritant, to the nostrils, and dash cold water on the face, previously rubbed briskly until it is warm.

5th. If there be no success, lose no time, but *imitate respiration*. Replace the patient on his face.

6th. Turn the body gently but completely *on the side, and a little beyond*, and then on the face, alternately; repeating these measures deliberately, efficiently and perseveringly, fifteen times in a minute *only*. When the patient reposes on the thorax, this cavity is *compressed* by the weight of the body, and *expiration* takes place; when he is turned on the side this pressure is removed, and *inspiration* occurs.

7th. When the *prone* position is resumed make equable but efficient *pressure along the spine*; removing it immediately before rotating on the side. (The first measure augments the *expiration*, and second commences *inspiration*).

8th. *To induce circulation and warmth*, rub the limbs upwards, with *firm pressure* and with *energy*, using handkerchiefs, etc.

9th. Replace the patient's wet clothing by such other covering as can be instantly procured, each bystander supplying a coat or a waistcoat.

10th. Meantime, and from time to time, *again to excite inspiration*, let the body be *slapped* briskly with the hand, and cold water be *dashed* briskly on the surface previously rubbed dry and warm.

Anxious screaming, with hurried breathing and spasmodic moving of the head, the eyes and hands; lambling weakness: Cocc. He lies motionless as after a severe concussion of the brain: Arn. Dry, black, trembling tongue; sunken, pale countenance, with fallen lower jaw: Ars. Tossing about as if from internal anxiety; delirium, with moving of the hands and fingers; lips dry, cracked, and black; involuntary stool and urination; coldness of the skin: Lach. After loss of fluids: China. In the last stage, with swollen and tympanitic abdomen, with discharge of foul-smelling wind, and involuntary stool smelling like carrion; cold breath; coldness of the throat and mouth, especially of the tongue: Carb. v. After a fit of anger: Cham.
